

Shoulder pain

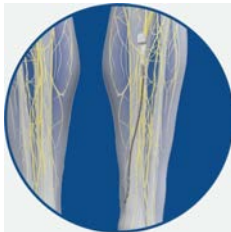

Back pain

Knee pain

Foot pain

the COMFORT clinical trial

Do you have patients who have tried multiple treatments for their nerve pain, with no relief? Have they been prescribed the Nalu PNS system to treat their chronic pain? If they're suffering from pain in one of these areas, they may be a candidate for the COMFORT clinical trial.

This trial is comparing the FDA-cleared Nalu peripheral nerve stimulation system combined with conventional treatments to conventional treatments alone. Help us improve the treatment of intractable nerve pain by identifying potential candidates.

Peripheral nerve stimulation therapy uses gentle electrical impulses to interrupt pain signals before they get to the brain. This peripheral nerve stimulation device is designed to be:

durable *The micro-IPG has the longest FDA-cleared service life of 18 years*

manageable *The system is designed to be discreet*

comfortable *Place the micro-IPG where it is most comfortable for patients*

livable *The system is designed so the charger is not attached to patients*

adaptable *The system is designed for patients to control intensity and type of therapy*

Contact us to learn more

Our practice is currently enrolling patients in the COMFORT clinical trial, and we can determine if your patient is a good candidate. Eligible participants will be compensated for their time. Learn more about the trial at nalumed.com/clinical-trials/comfort-trial.
